

Airport Operations Report: Dec. 2018

- 1) Plowing operations in effect for December. Combined crew total was 45.5 hours.
- 2) All runway lights are intact and operational. PAPI 32 had a tripped one morning, but has been running fine since the reset.
- 3) Tie Down Fees: Envelopes, Envelope holder, and signage will be posted to help assist pilots that there are tie down fees, and with envelopes, hopefully that will make it easier. Not done yet. In development.
- 4) Encountered a major issue with the computer that manages the 100LL fuel management, and electronic gate/pilot entrance cards. The computer had the infamous BSOD (Blue Screen of Death), and would not boot up.
Had to purchase a refurbished computer running Windows 7 since the software is not supported beyond Windows 8, and Windows 7 was recommended. Windows XP was the operating system on the crashed computer.
All configuration settings were lost on the crashed computer. It took some effort to get both systems back up to operational state.
A boot DVD disk along with a recovery system DVD disks was created for the new computer if and when this computer fails.
All data is now currently backed up nightly in cloud storage.
A power failure along with weak batteries in the backup UPS may have contributed to the computer failing. UPS was beeping in an error state. Electronic Gate and fuel terminal was also nonoperational until the UPS was reset. New batteries will be ordered soon.
