

MANITOWISH WATERS ROAD DEPARTMENT

April 5, 2019

MARCH ROAD REPORT

After a nearly record setting month of snow accumulation, March faired much better. There was nowhere near as much snow as in February. Although around mid month it rained on our already frozen roads creating treacherous road conditions.

Winter road procedures for the month: PLOWINGS (2)
SCRAPINGS (4)
SANDINGS (3)

Do to our inability to effectively wing back the shoulders of our roads the front end loader needed to be used to help widen roads and open up intersections. A much more effective and efficient method of doing this process would be installing a snow blower attachment similar to the Airport's on the John Deere 6330 tractor.

The 2nd Phase of the road sign replacement project have been ordered.

We finally installed a 2 Way radio into our new pickup truck.

The septic line at the Town Garage froze up once again. This time we were able to thaw it out ourselves.
