

# MANITOWISH WATERS ROAD DEPARTMENT

---

February 10, 2020

## JANUARY ROAD REPORT

It's been a mechanical breakdown laden month of January. The #1 Patrol Truck encountered a defective fuel pump during a plowing operation. After the repair was preformed, it was determined that the PARTICULATE(Exhaust System)FILTER was severely plugged. The unit needed to be removed and sent out for cleaning. The truck was down for nine working days. During that time the Airport's Patrol Truck was borrowed to help with plowing. Shortly there after the Airport's plow "fell apart" during a plowing procedure. Fortunately we were able to put on the #1 Patrol Truck's plow and continue. The Airport's plow has since been repaired.

Winter road procedures for the month: PLOWINGS (6)  
SCRAPINGS (2)  
SANDINGS (2)  
WINGING (1)

Time was also spent opening and widening intersections and turnarounds.

At the Community Building basement, the 300 watt incandescent bulbs were replaced with more energy efficient LED lighting.

With Larry's absence at the Transfer Site a smooth transition between Dave and Josh is covering the weekend shift.
